SELECTED PRODUCTION APPLICATIONS

Scale Visibility - AI Search Readiness Platform

Technologies: Next.js 16, TypeScript, PostgreSQL, Supabase, Drizzle ORM, Stripe, Inngest, Vercel

Production app | **Public tools** | **Project showcase**

- Built and sustain an authenticated SaaS workspace for AI Search Readiness Audits, saved reports, AI citation matrices, technical fixes, and competitor benchmarks
- Developed six public tools covering AI visibility, Schema.org markup, entity and knowledge-graph readiness, llms.txt, AI crawler access, and PageSpeed revenue impact
- Own the production application end to end, including product design, implementation, deployment, iteration, and operational maintenance

It's an Art Party - Multi-City Provider Directory

Technologies: Next.js 16, TypeScript, Clerk, Stripe, Vercel Postgres/Neon, Drizzle ORM, Vercel Blob, Resend

Live directory | **Project showcase**

- Built authenticated provider self-service for free business listings and sponsored upgrades across live Charlotte, Frisco, and Scottsdale directory pages
- Implemented server-validated sponsorship status, Stripe billing through Clerk, PostgreSQL persistence with Drizzle, logo uploads, subscription webhooks, waitlists, and branded lifecycle email
- Server-rendered listings with ISR, dynamic metadata, LocalBusiness and ItemList JSON-LD, sitemaps, and llms.txt to support search and AI-crawler visibility

TrueTourney - Youth Sports Tournament Discovery Platform

Technologies: Next.js, React, TypeScript, Node.js, Upstash Redis, Resend, Vercel

truetourney.com | **Project showcase**

- Built and operate a tournament discovery platform covering six states, with searchable listings, division-level pricing, availability, and event detail pages
- Developed scheduled data ingestion with change tracking, source-data validation, and recovery safeguards that preserve existing records when refreshes are incomplete
- Implemented director submission workflows, notification and receipt emails, and outbound registration-click tracking with bot filtering and reporting

Additional Project: Inventory & Order Tracker

Technologies: React, C#, ASP.NET Core, Entity Framework Core, SQLite, Docker, AWS

GitHub repository | **Live application**

- Built a React and ASP.NET Core inventory application with order workflows, transactional stock deduction, and an audit trail; covered by 19 xUnit integration tests and deployed on AWS App Runner, S3, and CloudFront
